

OM HINGE

DevOps Engineer | Cloud Infrastructure | Kubernetes & AKS
om.hinge.2635@gmail.com | linkedin.com/in/om-hinge2635 | github.com/Aisu2635

PROFESSIONAL SUMMARY

DevOps Engineer at Bajaj Finserv Health owning 3–5 AKS clusters and 100+ microservices across two enterprise orgs. Led team as acting tech lead, resolving production-grade incidents, and architecting the full Nginx-to-Traefik ingress migration with zero downtime. Drives CI/CD standardisation, OpenTofu IaC, and Azure cost optimisation in a high-scale fintech environment.

EXPERIENCE

Bajaj Finserv Health Ltd. (BFHL + Vidal Health)

Apr 2025 – Present

Software Developer – DevOps Pune, India

Leadership & Mentorship

Acted as de facto tech lead for the DevOps function, owning architecture decisions, incident escalations, and cross-team coordination across both BFHL and Vidal Health organisations.

Trained and mentored 3 interns end-to-end covering Kubernetes fundamentals, CI/CD workflows, and Azure infrastructure, accelerating their onboarding and contributing to team capacity.

Incident Response & Production Reliability

Resolved production-grade incidents across AKS clusters, MongoDB, and Azure VMs, diagnosing root causes, applying fixes under live-traffic conditions, and documenting runbooks to prevent recurrence.

Owned disaster recovery planning for 3–5 AKS clusters, establishing failover procedures and maintaining 99.9%+ service availability across both organisations.

Infrastructure & Kubernetes

Sole engineer to architect and execute the Nginx-to-Traefik ingress migration across 100+ microservices in two organisations, achieving zero-downtime cutover ahead of Nginx end-of-life.

Onboarded 10+ services to Kubernetes by authoring Helm charts, configuring Traefik ingress rules, and enforcing resource limits, reducing time-to-deploy for new services by ~30%.

Cloud Networking & Security

Designed and configured enterprise hybrid networking including IPsec VPN Tunnels, User-Defined Routes (UDRs), and Azure Firewall routing policies to secure inter-VNet and cross-cloud traffic.

CI/CD and IaC

Engineered and maintained 5–15 Azure DevOps CI/CD pipelines across both orgs, standardising build-test-deploy workflows and eliminating manual release overhead.

Automated infrastructure provisioning and machine patching via Terraform and Bash/Python, enforcing consistent configs and cutting repetitive ops toil.

Reduced Azure cloud spend by ~8% through VM rightsizing, orphan resource cleanup, and automated non-production shutdown schedules.

Xora Business Solutions Pvt. Ltd.

Jan 2025 – Apr 2025

Software DevOps Engineer Intern Seattle (Remote)

Restructured entire CI/CD pipeline on GitLab CI/CD, reducing deployment cycle time by 40% and reducing pipeline agent cost.

Implemented Blue-Green deployment strategy, enabling zero-downtime production releases and eliminating rollback risk for all application updates.

SKILLS

Cloud: Azure (primary), AWS, GCP

Containers & Orchestration: Kubernetes, AKS, Docker, Helm

Ingress & Networking: Traefik, Nginx, IPsec VPN Tunnels, Azure Firewall, UDRs, VNet, NSG, Azure Load Balancer

CI/CD: Azure DevOps, GitLab CI/CD, GitHub Actions

IaC & Automation: OpenTofu, Terraform, Bash, Python

Monitoring: Prometheus, Grafana

Languages: Python, Go, JavaScript, Bash, C

Tools & Databases: Git, Jira, Confluence, Azure CLI, AWS CLI, MongoDB, Azure DevOps

PROJECTS

DB Dashboard – Centralized Database Access & Governance Platform.

May 2026

Built internal portal for automated DB user creation, role-based access requests, scheduled expiry tracking, automated email alerts, and PII data classification schemas.

FlowOps – Visual CI/CD Workflow Builder.

Jan 2025

Designed a drag-and-drop pipeline builder that auto-generates GitHub Actions YAML, cutting pipeline setup time for non-technical users from hours to minutes.

EDUCATION

Thakur College of Engineering & Technology, Mumbai.

Dec 2021 – May 2025

B.E. Computer Engineering | CGPA: 9.42 / 10.00 | Concentrations: Cloud, DevOps, AIML
