OM HINGE

DevOps Engineer | Cloud Infrastructure | Kubernetes | Cloud Networking

om.hinge.2635@gmail.com | omhinge.cloud | linkedin.com/in/om-hinge2635 | github.com/Aisu2635

PROFESSIONAL SUMMARY

DevOps Engineer at Bajaj Finserv Health running 6 AKS clusters and 100+ microservices across two healthcare platforms. Led the Nginx-to-Traefik ingress migration with zero downtime, handles production incidents end-to-end, and drives CI/CD automation, OpenTofu IaC and Azure cost optimisation in a high-scale health-tech environment.

EXPERIENCE

Bajaj Finserv Health Ltd. (BFHL + Vidal Health) **Apr 2025 – Present**

Associate Software Developer (DevOps), Nov 2025 – Present · DevOps Intern, Apr 2025 – Oct 2025 · Pune, India

- **Ownership & mentoring:** Main point of contact for DevOps across BFHL and Vidal Health, handling architecture decisions and incident escalations; trained 3 interns end-to-end on Kubernetes, CI/CD and Azure.
- **Ingress migration:** Designed and executed, as the sole engineer, the Nginx-to-Traefik migration across 100+ microservices in two organisations, with a zero-downtime cutover ahead of Nginx end-of-life.
- **Reliability:** Resolved production incidents across AKS, MongoDB and Azure VMs under live traffic and wrote runbooks to prevent recurrence; owned DR and failover for 6 AKS clusters at 99.9%+ availability.
- **Kubernetes onboarding:** Onboarded 10+ services with Helm charts, Traefik ingress rules and resource limits; ~30% faster to deploy.
- **Cloudflare WAF migration:** Played a key role in moving apps behind Cloudflare WAF; deployed the VMs running cloudflared tunnels and wrote the UDRs and Azure Firewall policies that route every hop from Cloudflare to the apps through the firewall.
- **Cloud networking:** Designed hybrid networking with IPSec VPN tunnels, UDRs and Azure Firewall policies to secure inter-VNet and cross-cloud traffic.
- **Automation pipelines:** Built 6 custom Azure DevOps pipelines, including ACR base-image updates, VMSS agent-image rebuilds that pre-bake tools so builds skip install steps, an on-demand VMSS scale-up and deploy pipeline for dev teams, an AKS network-debug pod deployer, and an ingress validator that catches duplicate routes.
- **CI/CD & IaC:** Maintained build-test-deploy pipelines across both orgs; automated provisioning and patching with Terraform/OpenTofu and Bash/Python.
- **AWS (in progress):** Setting up AWS infrastructure for a new project: EC2 provisioning, S3, ECR and IAM.
- **Cost:** Cut Azure spend by ~8% through VM rightsizing, orphan resource cleanup and non-prod shutdown schedules.

Xora Business Solutions Pvt. Ltd. **Feb 2025 – Mar 2025**

DevOps Engineer Intern · Mumbai (Remote)

- Revamped all GitLab CI/CD pipelines for faster deployments, cutting deployment cycle time by 40% and lowering agent cost.
- Added environment-specific deployments and a Blue-Green strategy for zero-downtime production releases.

Artha IT (HealthFlo) **Feb 2025 – Mar 2025**

Software Engineer – DevOps (Part-time) · Chantilly, VA (Remote)

- Built the HealthFlo app's foundation Azure infrastructure and databases from scratch, with separate environments.
- Created the deployment pipelines and set up Git workflows and practices for the dev teams; ran scrums and the Azure DevOps board.

Claw Enterprises **May 2024 – Jul 2024**

Cloud Engineer Intern · India (Remote)

- Built the initial cloud infrastructure and wrote the team's first CI/CD pipelines.

PROJECTS

RoleCraft – Browser-only AWS IAM Policy Builder · React 19, Vite, Zod · rolecraft.omhinge.cloud **Oct 2026**

- Open-source IAM policy builder covering 456 AWS services (~22k actions) with 9 lint rules for risky permissions; exports to JSON, Terraform, CloudFormation, Bash and PowerShell, fully client-side.

omhinge.cloud – Portfolio & Engineering Blog · Cloudflare Pages, GitHub Actions, Node.js **Oct 2026**

- Git-deployed on Cloudflare Pages: zero-dependency Markdown blog builder, CSP/HSTS headers, CI checks on every deploy.

DB Dashboard – Centralized Database Access & Governance Platform **May 2026**

- Internal portal automating DB user creation, role-based access requests, expiry tracking, email alerts and PII classification.

FlowOps – Visual CI/CD Workflow Builder **Jan 2025**

- Drag-and-drop builder that generates GitHub Actions YAML, cutting pipeline setup from hours to minutes.

SKILLS

Cloud: Azure (primary), AWS (EC2, S3, ECR, IAM), GCP
Networking: Traefik, Nginx, IPSec VPN, Azure Firewall, UDRs, VNet, NSG, Load Balancer, Cloudflare WAF & Tunnels
IaC & Automation: OpenTofu, Terraform, Bash, Python
Languages & Frameworks: Python, Go, JavaScript, React, Bash, C
Containers & Orchestration: Kubernetes, AKS, Docker, Helm
CI/CD: Azure DevOps, GitLab CI/CD, GitHub Actions
Monitoring: Prometheus, Grafana
Tools & DBs: Git, Jira, Confluence, Azure/AWS CLI, MongoDB

EDUCATION

Thakur College of Engineering & Technology, Mumbai **Dec 2021 – May 2025**

B.E. Computer Engineering | CGPA: 9.42 / 10.00 | Concentrations: Cloud, DevOps, AIML
